

2nd International Paediatric Congress of Paediatric Association of the Balkan

Ljubljana, Slovenia; 27–29 March, 2015 | www.pab2015.org

Invitation letter

Paediatricians from the Southeastern part of Europe want to articulate our will for the co-operation and that is why the Paediatric Association of the Balkan has been born. We are following one of the modern European project of transborder joint activities in several fields, including medicine.

There are several paediatric subspecialties which are co-working in the region already and their contribution on the Congress is of outstanding importance to show the way how to implement such a co-operation.

2nd International Paediatric Congress of the Paediatric Association of the Balkan will cover a lot of topics to see the issues of common interest. I am sure the exchange of experiences would be fruitful and supported by a genuine readiness of the most prominent paediatricians to do a step forward in this effort. At the end of March, there is a springtime in Ljubljana and an ideal time for a varied social programme with something for everyone, and plenty of opportunities for networking.

Main topics

- Is There any Place for Probiotics in Neonatology
- Necrotising Enterocolitis – Multidisciplinary Approach
- Challenges in Cardiology
- Invasive Procedures in Gastrointestinal Endoscopy
- How to Treat Rare Diseases
